Summary

Results-driven software engineer with 9+ years of experience in frontend development, web deployment, and technical mentoring. Expertise in HTML, CSS, JavaScript, React, Next.js, and Webflow, with a proven track record of building and launching responsive, accessible websites for startups, nonprofits, and student projects. Skilled at translating concepts into clean, admissions-credible web presences, debugging complex issues, and guiding non-technical users through site structure, UX, and deployment. Adept at recommending appropriate tools based on skill level and collaborating with cross-functional teams to ensure deliverables align with project milestones. Committed to empowering students to learn just enough, build correctly, and ship real-world projects.

Experience

Mid Software Engineer | McKinsey

May 2024 – Present

- Developed and maintained responsive frontend components using React and Next.js for internal client-facing web applications, ensuring high performance, accessibility, and cross-browser compatibility while collaborating with designers and product managers to translate wireframes into pixel-perfect, admissions-credible interfaces that effectively communicate complex data insights to non-technical stakeholders.
- Led the migration of legacy static sites to modern Jamstack architecture deployed on Vercel, reducing page load times by 40% and improving SEO rankings, while documenting deployment processes and hosting configurations to enable team members to independently manage future updates and troubleshoot common issues without engineering support.
- Provided hands-on technical support and mentoring to junior engineers and non-technical colleagues on frontend best practices, including semantic HTML, CSS Flexbox/Grid, and JavaScript debugging techniques, fostering a culture of learning and enabling team members to contribute to web projects with confidence and autonomy.
- Built and launched a series of landing pages for internal innovation initiatives using Webflow and custom HTML/CSS, optimizing for conversion and mobile responsiveness, and conducted A/B tests to refine UX elements such as call-to-action placement and form design, resulting in a 25% increase in user engagement metrics.
- Troubleshooted and resolved complex layout and deployment issues across multiple hosting environments, including Netlify and AWS Amplify, by systematically diagnosing root causes and implementing robust fixes, while clearly explaining technical concepts to non-technical stakeholders to ensure alignment and prevent recurrence.
- Collaborated with cross-functional teams to define project milestones and web deliverables, ensuring that all sites met performance, accessibility, and professionalism standards, and provided recommendations on appropriate tech stacks based on project requirements and team skill levels, balancing no-code solutions with custom development.
- Implemented automated testing and continuous integration pipelines for frontend codebases using GitHub Actions, reducing deployment errors by 30% and ensuring consistent code quality, while creating comprehensive documentation and training materials to help team members understand and maintain the CI/CD workflows.
- Optimized website performance through code splitting, lazy loading, and image compression techniques, achieving Lighthouse scores above 90 for performance and accessibility, and educated stakeholders on the importance of these metrics for user experience and search engine visibility.
- Mentored student interns on real-world web development projects, guiding them through the process of building portfolio sites and MVP landing pages using React and Webflow, and teaching them just enough to execute professionally without overwhelming them with unnecessary technical complexity.
- Evaluated and recommended third-party tools and APIs for integration into client projects, conducting thorough comparisons of features, pricing, and ease of use, and provided clear, structured guidance to non-technical users on how to leverage these tools to enhance their web presence and achieve project goals.

- Developed and maintained responsive web interfaces for digital banking platforms using HTML, CSS, JavaScript, and React, ensuring seamless user experiences across devices and browsers, and collaborated with UX designers to implement accessible, high-performance features that met strict financial industry standards and user expectations.
- Assisted in the deployment and hosting of web applications on AWS and Netlify, configuring DNS settings, SSL certificates, and CDN caching to optimize load times and security, while documenting deployment procedures and troubleshooting steps to facilitate knowledge sharing and reduce downtime during releases.
- Debugged and resolved frontend layout and functionality issues reported by QA and end-users, using Chrome DevTools and console logging to identify root causes, and implemented fixes that improved user satisfaction scores by 15% within three months, while clearly communicating technical details to non-technical support staff.
- Built a portfolio website for a local nonprofit using Webflow, translating their mission and impact stories into a clean, admissions-credible web presence, and provided training to their team on how to update content, manage forms, and maintain the site without ongoing developer support.
- Collaborated with senior engineers to refactor legacy code and improve site performance, reducing page load times by 20% through image optimization, minification, and lazy loading, and participated in code reviews to ensure adherence to best practices and maintainable, well-documented code.
- Provided technical guidance to marketing and design teams on best practices for landing page structure, UX, and accessibility, helping them create campaign pages that were both visually appealing and optimized for conversion, and recommended appropriate no-code tools like Wix for simple projects to reduce dependency on engineering resources.
- Created and maintained internal documentation for frontend development standards, deployment workflows, and troubleshooting guides, enabling new team members to onboard quickly and independently resolve common issues, and conducted training sessions to walk through the documentation and answer questions.
- Participated in agile ceremonies and sprint planning, estimating tasks and coordinating with cross-functional teams to ensure web deliverables aligned with project milestones, and proactively communicated progress and blockers to stakeholders to maintain transparency and trust.

- Contributed to the development of internal tools and dashboards using React and JavaScript, collaborating with senior engineers to implement responsive UI components and fix bugs, and gained hands-on experience with Git, GitHub Actions, and deployment pipelines while learning to write clean, maintainable code.
- Assisted in the creation of a student-focused portfolio template using HTML, CSS, and vanilla JavaScript, designed to help beginners build and deploy a simple personal website, and documented the setup process and customization options to make it accessible to non-technical users.
- Troubleshooted and resolved frontend issues in a legacy codebase, using browser developer tools to diagnose layout and compatibility problems, and implemented fixes that improved cross-browser consistency and user experience, while clearly explaining the solutions to team members during code reviews.
- Participated in code reviews and team meetings, providing constructive feedback on peers' code and learning best practices for version control, testing, and deployment, and proactively sought mentorship to deepen understanding of web development workflows and tools.
- Researched and recommended low-code tools such as Webflow and Wix for rapid prototyping of landing pages, evaluating their features and limitations, and presented findings to the team to inform decisions on tool selection for future projects.

Skills

Frontend Development	HTML5, CSS3, JavaScript (ES6+), React, Next.js, Vue.js, Responsive Design, Cross-Browser Compatibility
No-Code/Low-Code Platforms	Webflow, Wix, Squarespace, WordPress, Shopify
Deployment & Hosting	Vercel, Netlify, GitHub Pages, AWS Amplify, Basic Hosting Setups, DNS Management
UX/UI & Design	Wireframing, Prototyping, Figma, Adobe XD, Landing Page Optimization, Accessibility

Technical Support &
Mentoring
Tools & Version Control

(WCAG)
Debugging, Troubleshooting, Technical Documentation, Student Mentoring, Non-
Technical Communication
Git, GitHub, GitLab, VS Code, Chrome DevTools, Performance Optimization

Education

Bachelor of Computer Science | University of North Texas

2016 – 2020
